

Professional solutions for different conditions

Reliability - Service - Results are the key words for Limtré Virnet.

Limtré Virnet is an environmentally friendly Icelandic company with an established reputation. It prides itself on its long tradition and its understanding of customers' requirements. Limtré Virnet continues to devote itself to offering only high quality products and services. We at Limtré Virnet believe that our highly skilled and experienced staff is the cornerstone of our continued success.

Activity in Borgarnes

The company's head office is located in the town of Borgarnes, together with the roll-forming factory, nail production factory, and a sales office. Other related activities, such as the tin metal workshop, the smithy and the electrical department, are also located in Borgarnes, providing service to neighbouring communities.

Social responsibility

The company has always played an active role in the community, supporting sporting and cultural events and local youth organisations.

Activity in Borgarnes

Claddings and wall profiles

Límtré Vírnet produces claddings for interior and exterior use in sinus 18 and trapezoidal 20/45 and a painted aluminium. It also produces interior wall profiles from galvanized steel in standard dimensions.

Nails

Límtré Vírnet has produced nails since 1956. The most common types are used for wood construction, roofing, and walls. Nails for nail pistols are available in black- and hot dip galvanized steel, stainless steel and aluminium in various sizes.

Tin metal workshop

The tin metal workshop produces accessories for our wall- and roof claddings but also takes on various special projects which include ventilation items, flashings etc.

Smithy

The smithy produces steel fasteners for our building solutions, hay feeders for sheep, and also undertakes various special projects that require expert workmanship in steel.

Electrical department

The electrical department supports projects in other departments within the company and also undertakes projects for individuals and contractors.

Production in Flúðir

The factory at Flúðir is unique in being the only producer of glue-laminated wood beams (glulam) in Iceland. Production is in accordance with strict quality standards. Geothermal energy is used to accelerate the gluing process and to render it extremely environmentally friendly. The production consists of straight beams in standard sizes, specially designed glulam structures for buildings and various other different projects.

Production in Reykholt

The production of sandwich panels takes place at Reykholt. The panels are steel-faced with an option of either a polyurethane or rock-wool core. The panel production at Reykholt was merged with the company in 1995 and provided the opportunity to offer collective solutions to customers that included the glulam structure, panels for roofs and walls and various other accessories.

Activity in Kópavogur

Building solutions

Límtré Vírnet has all the technical expertise and experience necessary to assist customers in the design of building structures, either independently or in coordination with architects and engineers. Our aim is always to find the solution that best meets the wishes and requirements of customers.

Ventilation products

We import high quality ventilation products from internationally known producers such as Lindab, Exhausto, Interfil and Rosenberg, and offer expert assistance to our customers in order to find the best solutions.

Garage and industrial doors

A large part of our range of garage and industrial doors is also imported from Lindab and we also assemble garage doors from imported components at our factory in Borgarnes for domestic customers who require a short delivery time. In addition, we provide installation service if so requested.

Roof draining system

We import and offer quality steel roof drainage systems from Lindab that are pre-painted in standard colours and are available at short notice from our warehouse.

History and main activity

Límtré Virnet was established in 2005 after the merger of two highly respected domestic building and construction companies: Virnet, founded in Borganes in 1956, and Límtré, founded at Flúðir in 1982. Límtré Virnet now comprises three factories located within a 100 km radius of Iceland's capital, Reykjavík. The company also operates in the Reykjavík area.

Límtré Virnet is currently the largest company in Iceland that produces corrugated metals products and also offers a wide range of other products. It is the only domestic producer of nails, glulam and sandwich panels and offers collective solutions for constructions. In addition to having excellent connections within the building industry, Límtré Virnet sells its products to retailers, building contractors, and individual customers. Límtré Virnet also imports quality products from established suppliers.

Quality Policy

- to offer our customers reliable and professional advice and solutions, and to provide them with the best possible service at all times
- to produce and market high quality products at internationally competitive prices
- to maintain the highest standards and meet the most stringent demands on our products and services
- to constantly monitor and improve the quality of our products

Environmental policy

Over the years, the company has become increasingly aware of utilising renewable energy and has long since committed itself to discovering new ways to adapt and improve its activities with a view to maintaining a safer and cleaner environment.
