Lindab

Garage doors

Custom designed for the Nordic building style

There are several considerations to keep in mind when it comes to selecting a new garage door. These are usually pretty clear-cut decisions, such as width, height, colour and accessories.

But why should you choose a Lindab garage door over any other? On the right, you can see some of the areas where we stand out above the rest.

Take a look at the brochure and read about the wealth of possibilities. We are quite sure that you will be convinced :-)

Unique ventilation openings that prevent moisture and help ensure an optimal indoor climate. With a ventilation opening at the top, it is possible to air out your garage without inviting in pests and leaves.

In the event of a fire, Lindab garage doors give off 50% less harmful flue gas. Furthermore the door will not feed a potential fire, which means that any flames will spread more slowly.

The door panel is protected against frost by a layer of extruding polystyrene, which reduces moisture absorption from 3 to 0.5%. This means you can keep heat in and the cold out throughout the door's full lifetime.

Safety is paramount with a Lindab garage door, which has both finger protection, fall protection and a motor with a built-in anti-burglary lock.

Our production methods and materials are environmentally friendly, and the components are 98% recyclable. Doors produced with an extruded polystyrene core result in a 50% reduction in CO₂ emissions (compared to doors made of polyurethane foam).

At Lindab, we believe in our products. That is why we offer a 5-year guarantee on door panels.

Steel, style and strength from inside to out

A garage door must be able to withstand a little bit of everything. That is why Lindab garage doors are built around a high-insulation core lined with a robust steel plate. This strong and lightweight combination provides great protection against break-ins, wind and weather while also matching with the house's architectural style, and offers just the kind of accessories you need.

5-year guarantee

Did you know...

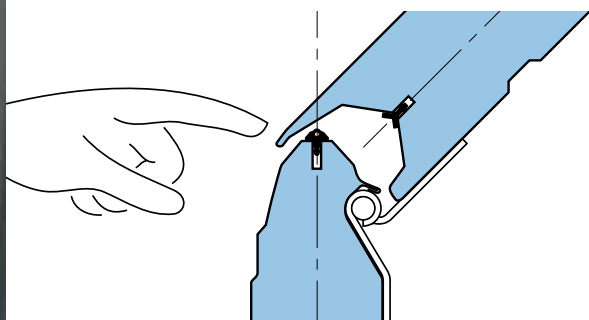

Lindab is the only company on the market that uses extruded polystyrene as a core? Extruded polystyrene has high insulating power, does not fuel potential fires and reduces water absorption by up to 84% compared to other core materials.

Steel, style and strength from inside to out

[Zero accidents](#) with Lindab garage doors. This is the mantra at our safety department – and it's a commitment we live up to! With a Lindab garage door, children and other prying fingers are safe. Our patented finger protection system prevents fingers from being caught and crushed. Our doors are equipped with fall protection, which prevents the door from closing if a wire or spring unexpectedly breaks.

Arctic versus tropic

If your garage feels like it fluctuates between the Arctic and the Tropics, it is most likely because your garage door is not insulated or closing as intended. Not only does this have a big effect on comfort, it is also expensive when the heating bill arrives. Lindab garage doors are made of 46 mm insulated sections with a partition along the centre line to reduce thermal bridging and heat loss and provide optimal insulation.

Customise your new garage door

Garage doors should be visually appealing and match the house's architectural style.

With a Lindab garage door, you can choose from a variety of attractive colours and two surface types. This way, you can customise your garage door so that it matches your home's roof, doors, windows and woodwork.

On the next couple of pages, you can see a selection of the customised possibilities you have with a garage door from Lindab.

Installing your new garage door

Lindab garage doors are manufactured with easy installation in mind. All parts of the door are factory-ready and need only be mounted using ordinary tools. Our easy installation instructions will help you from start to finish. If you would rather leave the installation to the professional, then we will happily help with that as well.

5-year guarantee

Did you know...

Lindab garage doors are developed and manufactured in Denmark? Not only are you assured a speedy delivery, but we also always have spare parts close by whenever you need them.

A Lindab garage door suites a Ford Mustang

For Tom Sandvei Larsen, a garage is not just a garage – it's his hobby room. He spent a lot of time decorating the space until it was just how he wanted it.

The right inside look

Tom is particularly pleased with the inside of his garage door. He likes the way everything has been put together, as the door is both simple and appealing to the eye.

Another thing he likes is the ventilation

opening that allows him to air out the garage without having to open the door.

Lindab has the full solution

At Lindab, you can customise your new garage door to make it just the way you want it. Whether it's a question of height, width, surface, colour or accessories, you'll find a wealth of options with us.

At www.lindab.dk/minport, you can find installation instructions and more information about your new garage door.

Electrical control for all needs

With electrical control from Lindab, you have a secure solution that provides a high level of user comfort.

All electrical controls feature power monitoring and built-in anti-theft protection. If the door detects an unintended opening, it will attempt to force the door closed. For additional security, you can add photocells to your system.

When it's raining, cold or dark, it's never nice to have to go out and open a garage door to get your car inside. This is something you can avoid with an automatic door opener that is remote-controlled from the car. With a push of a button, the garage door opens and the light inside the garage turns on – and from there all you have to do is drive in from the cold.

With a GoGogate2, it is quicker and easier to open, close and monitor your garage from your smartphone, tablet or computer. No matter where you are! Now it's even possible to programme your garage to open when you come home and close when you drive away – fully automatically!

Did you know...

We at Lindab take the environment seriously? That's why the composition of materials used in the production of Lindab garage doors emits 50% less CO₂ compared to foam-core doors.

Environment and sustainability

Unique and environmentally-friendly core material

The core made of extruded polystyrene makes Lindab garage doors 40% stronger than doors with foam cores. The polystyrene core is water-repellent, which makes the doors frost-proof. The adhesive power between the core and coating panels is twice as strong as before, which increases the door's durability.

High insulation

The panels keep heat in and the cold out with an insulation level (U value) of 0.6 W/m² K. Panels and seals can withstand high winds and protect against draughts, which cuts down on your energy consumption.

50% less in flue gas emissions in the event of fire

Doors produced with an extruded polystyrene core result in a 50% reduction in CO₂ emissions (compared to doors made of polyurethane foam). In the event of a fire, Lindab garage doors give off 50% less harmful flue gas.

98% recyclable

Lindab doors are built to last for many years, but when it comes time for a new one, you can remove the old one with a clean conscience. Our production methods and materials are environmentally friendly, and 98% of the components can be reused, which provides balance in your environmental accounts.

Gogogate2

GoGogate2

It doesn't get any easier!

Access control

GoGogate2 allows you to provide access to your guests at any time and from anywhere via smartphone, tablet or computer. With these functions, homeowners have the option of adjusting the settings for all users.

An option that all homeowners will love!

Door status

GoGogate2 sends notifications to you when the door is open or closed. It also has a calendar so that you can see who has access and when.

Leave home with peace of mind.

Video monitoring

With GoGogate2, you can keep an eye on what is happening and/or what has happened by installing an IP camera that's compatible with the app.

Because seeing is believing.

Remote-controlled access

GoGogate2 combines all of your remote controls in a single app, so that you can open and close your garage door from anywhere in the world.

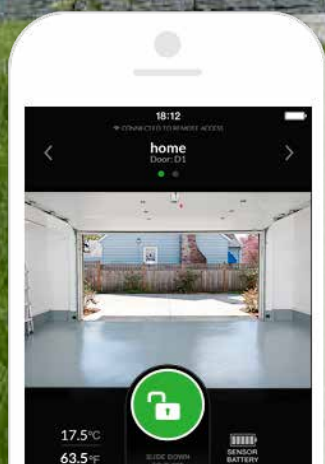

Your garage door is with you everywhere.

Multiplatform

Edit all of your GoGogate2 settings on the road. Are you expecting guests? Make and send them invitations from anywhere!

Much more than just an app.

Good Thinking

At Lindab, Good Thinking is a philosophy that guides us in everything we do. Everyday, we work to create a healthy indoor climate and to simplify the construction of sustainable buildings. We strive to design user friendly, innovative products and solutions and to ensure efficient logistics and availability. We are always attempting to optimise our operations so that we can reduce our footprint on the environment and the climate. We do this by developing new methods for the production of our products and solutions using a minimum of energy and natural resources, thereby reducing negative impact on the environment. We use steel in our production, and steel is one of few materials that can be reused an infinite number of times without losing its properties. This results in lower CO₂ emissions into the environment and less energy wastage.

We simplify construction
